DIGITAL CONSTRUCTION

REEKON Tools, based in Boston, MA, designs modern construction tools that seamlessly connect the job site. Our products deliver significant improvements in speed, safety, workflows, and error reduction. By capturing real-time data, organizing it through robust software, and enabling seamless execution, REEKON Tools transforms the way professionals work.

REEKÖN

REEKON ECOSYSTEM

The REEKON Tools Digital Construction Ecosystem works seamlessly together, out of the box, to provide unprecedented data sharing across the jobsite.

M1 CALIBER

The M1 Caliber Measuring Tool is an augmented tool that clamps directly to your miter saw fence and outputs digital measurements of anything slide underneath it. Speed and accuracy make the M1 the most effective way to complete your cut list in a fraction of the time of using a tape measure. The M1 can measure most English and metric units, output on a large backlit LCD screen, and automatically adjust its spring-loaded arm to measure any flat material.

T1

TOMAHAWK

The world's first, professional grade, digital tape measure enables tradespeople, across industries, to collect measurements faster and more accurately than ever before. A live view, OLED display, shows measurements of the tape measure, digitally, in both english and metric units. With a click of a button, measurements are saved to a side mounted e-paper display.

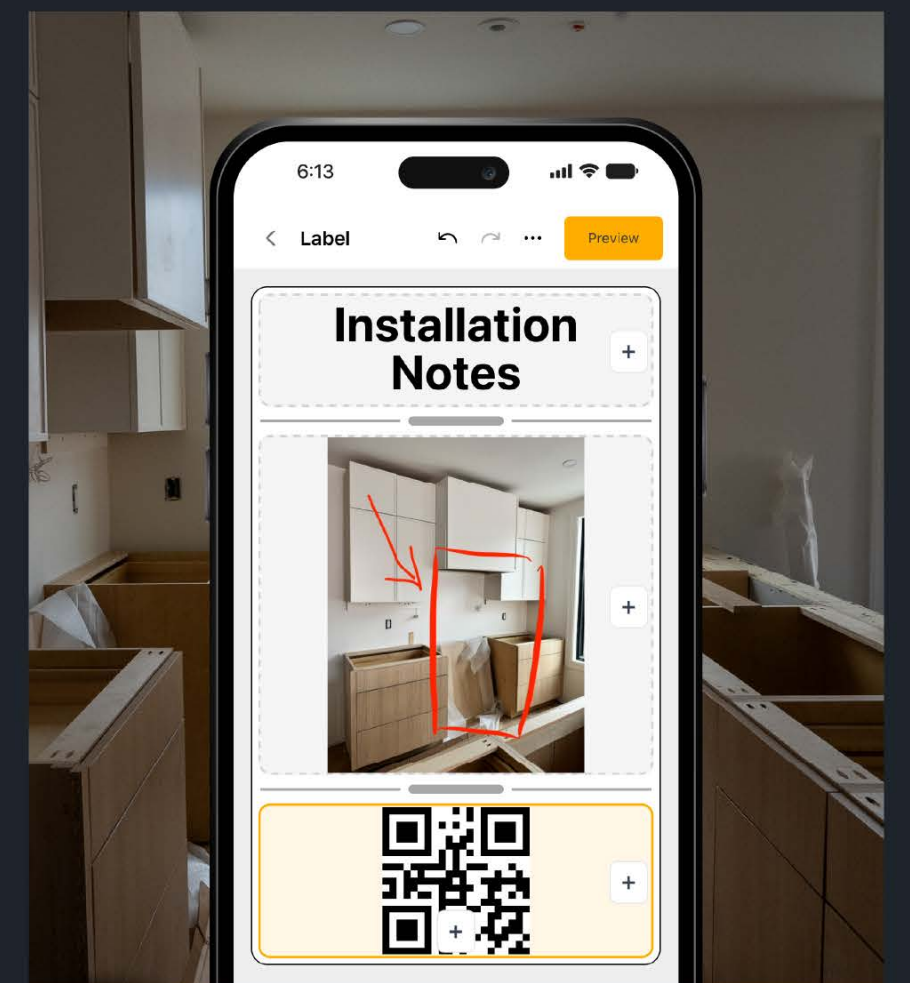

REEKÖN

P1L TAGGER

The P1L Tagger is a game-changing labeling tool designed to organize and simplify workflows on the modern job site. With seamless integration with the ROCK Jobsite App, the P1L allows users to create, customize, and print labels for materials, safety memos, purchase links, and more—all at the touch of a button. Mark materials, locations, issues, and just about anything with text and scannable QR codes printed on labels as well as directly on materials.

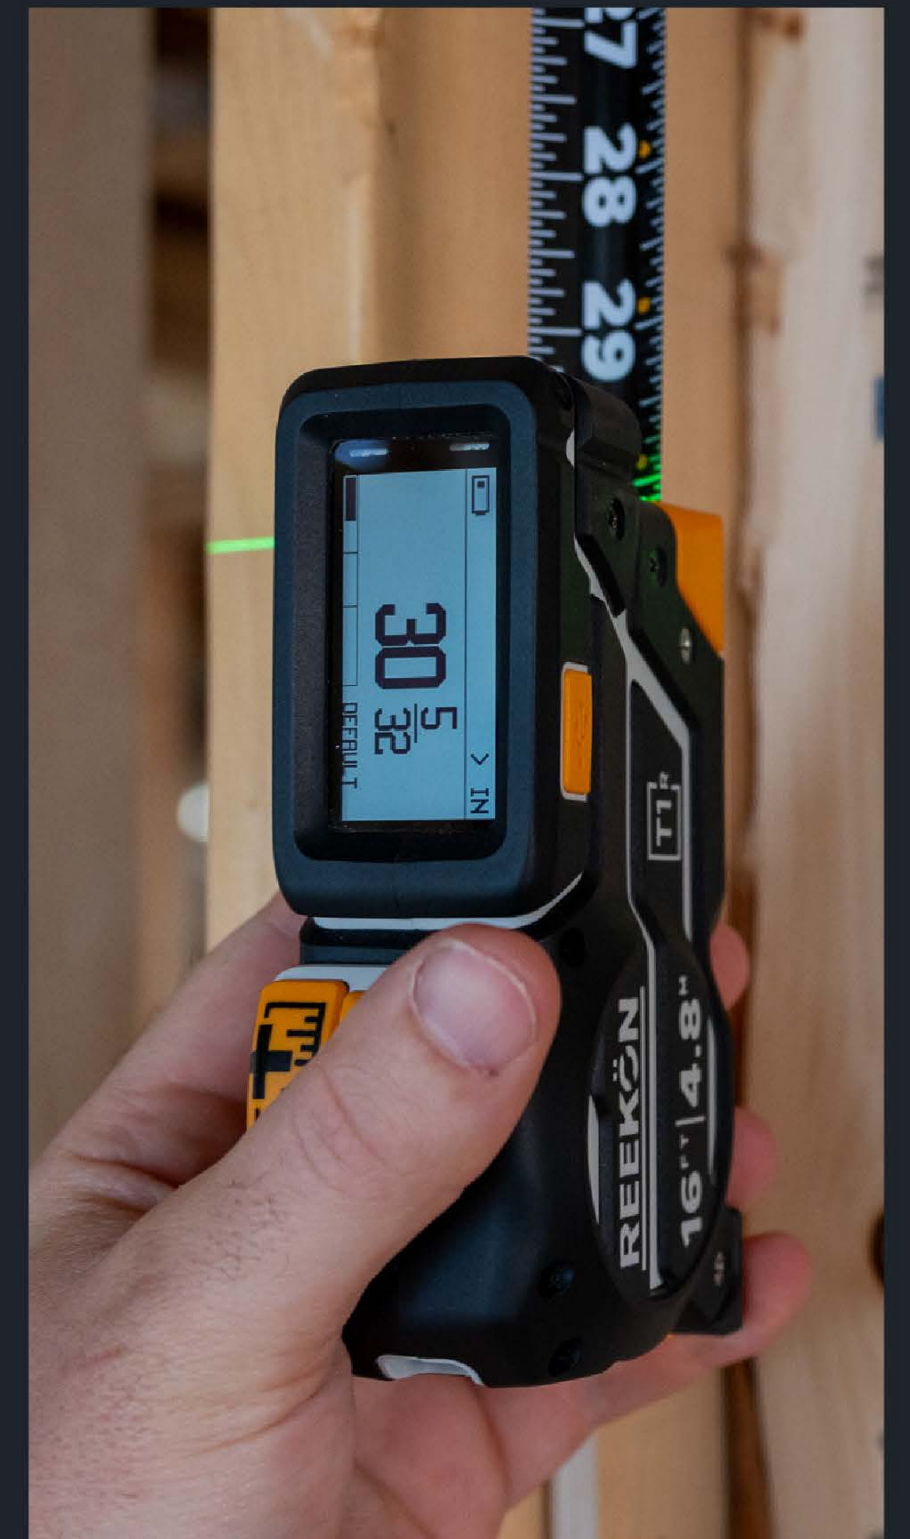

T1^R RANGE

The T1R is a hybrid digital tape measure that combines traditional blade measuring, laser distance measuring, and a built-in digital level into one rugged jobsite tool. It gives you the speed of a tape, the reach of a laser, and the precision of digital accuracy without switching tools. With reference control, quick action modifiers, and measurement organization, the T1R is built to reduce errors, eliminate rework, and keep you moving efficiently on site.

ACCURACY BLOCK

The Accuracy Block is a precision calibration tool designed to verify and fine-tune your tape measure for true measurement accuracy. It allows you to quickly test both push (external) and pull (internal) measurements and make precise digital blade adjustments when needed.

Built for the jobsite, it helps eliminate doubt, align crews to the same standard, and ensure every measurement starts from a known, trusted reference.

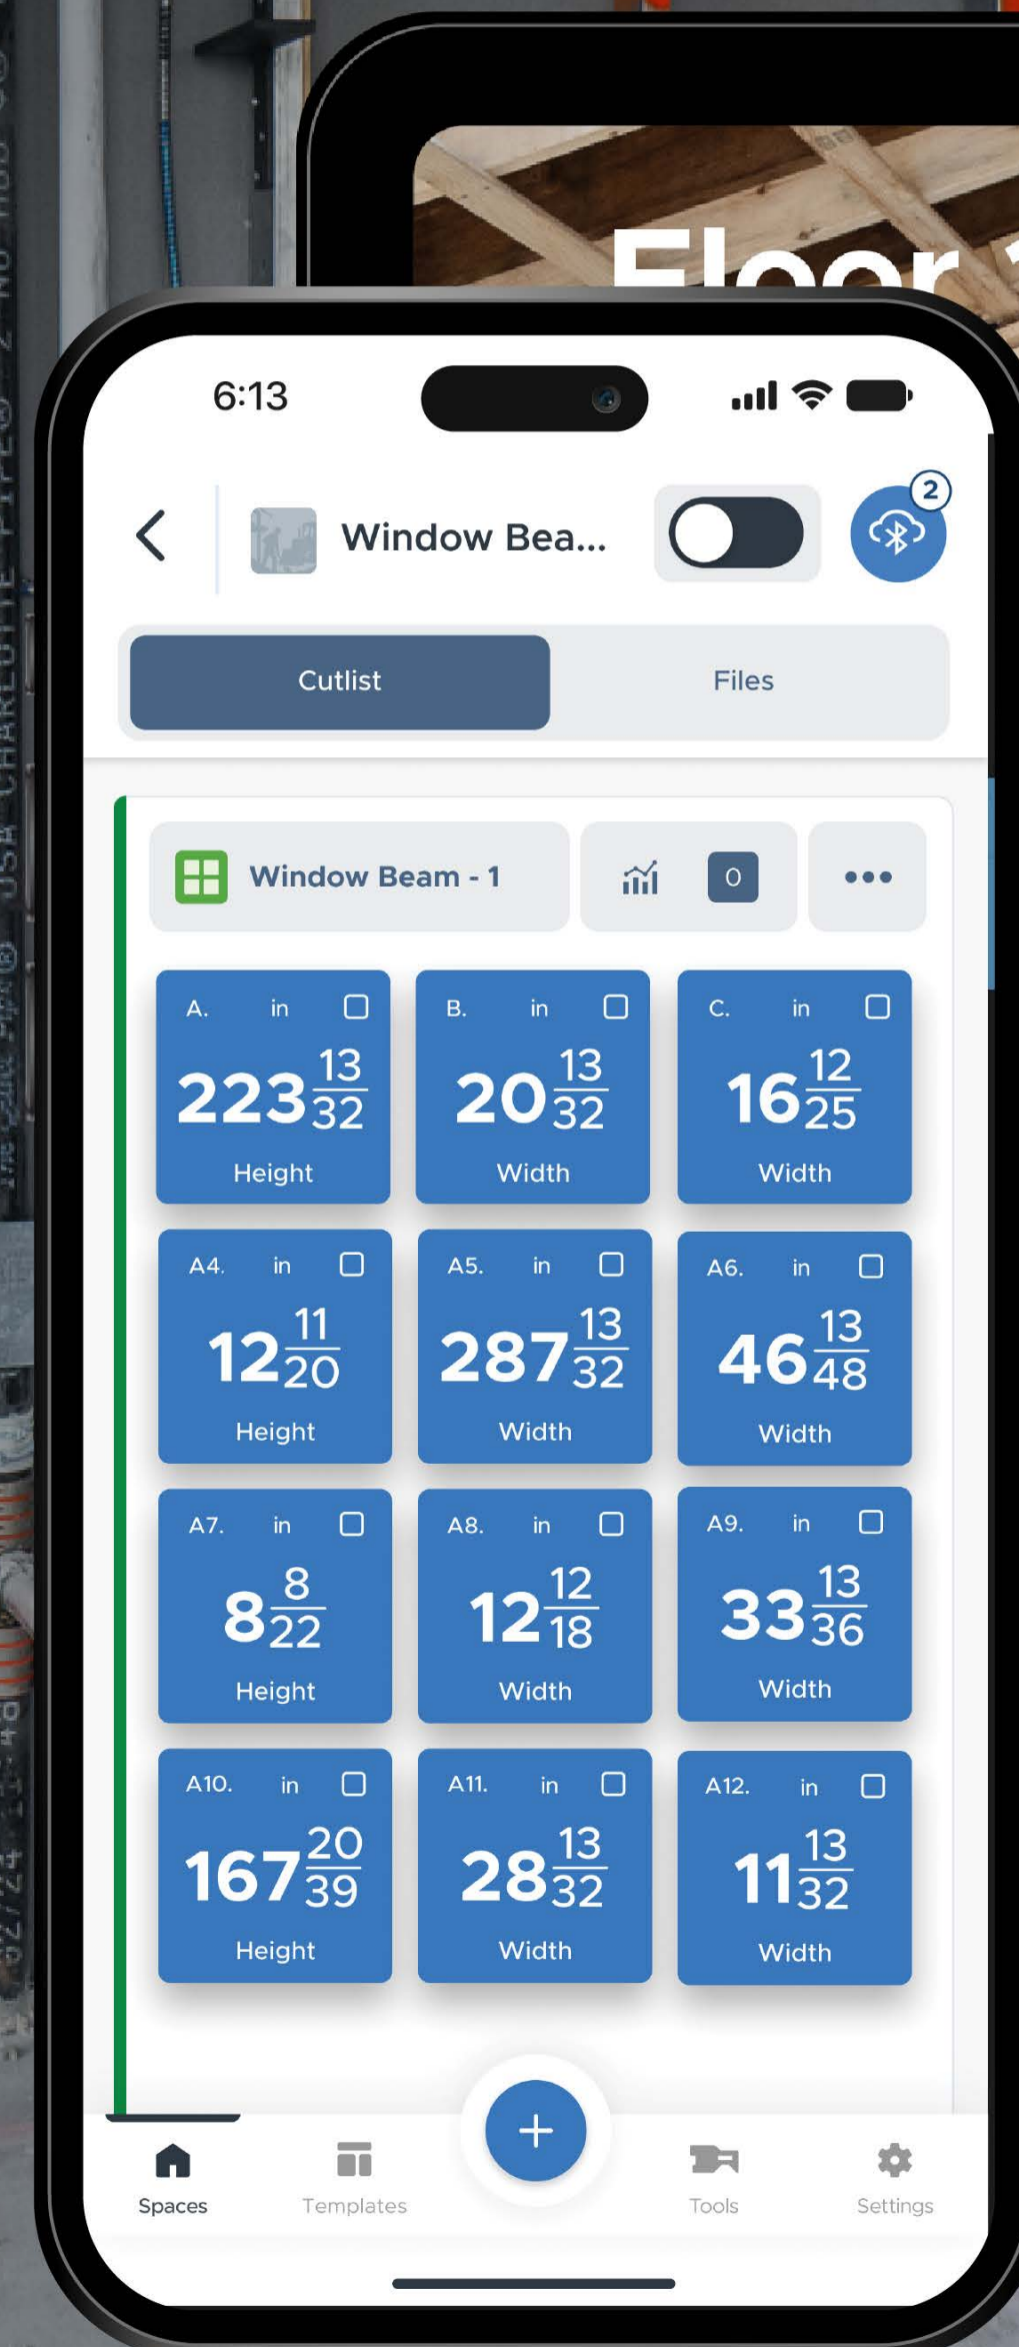

BOLD R PRO

Upgrade your projects with the ROCK Jobsite App. Compile all your measurements in an organized location. Use English or Metric units and set your desired tolerance. Easily organize measurements by tags, locations, types, and more. Add details like mitered edges, who recorded each measurement, and additional notes to stay on top of your work.

Scan the code to connect your new device for optimized cutting, organized notes, and a seamless workflow. Or visit: www.reekon.xyz/boldr

REEKON

PROFESSIONAL SOLUTIONS

Whether you are running 1 tool or 100, REEKON Tools has you covered. From a wide range of hardware options for fleet use, advanced software packages to capture and organize measurements, and even custom software integrations - reach out to our team to discuss your professional application.
